STILLWATER CONTINUES COVID-19 VACCINATION CLINIC

June 10, 2021 – Columbus, Montana. Stillwater Billings Clinic announced earlier this week that the COVID-19 Vaccination Clinics are still being held each Friday at SBC and will offer both Johnson & Johnson and Moderna vaccines.

Upon recommendation by the State of Montana's public health officials, counties across the state are being asked to utilize the remainder of the Johnson & Johnson allocations that have been distributed. Johnson & Johnson is safe, a one-shot dose, and can be administered to people ages 18 and older.

"It is currently unknown at this time if we will receive additional allotments of the Johnson & Johnson vaccine. We have a limited supply left and our vaccination team will continue administering doses unless they haven't been utilized by their expiration date in July. We want to make sure that individuals wanting the one-shot vaccine have the opportunity, so it is imperative that they act quickly," says Dr. Cody White, Stillwater County Public Health Medical Director.

COVID-19 Vaccination Clinics continue to be held each Friday at Stillwater Billings Clinic and will have extended hours on the 11th and 18th, which will be from 9 a.m. to 4 p.m.

Please continue to take all appropriate protective and preventative measures if you are not fully vaccinated. If you have COVID-19 related questions, contact Public Health at 322-1070.
